

A CD-ROM on Northwest African Marine Ecosystems

Maria Lourdes PALOMARES¹, Dirk ZELLER¹, Cindy YOUNG², Shawn BOOTH¹, and Daniel PAULY¹

This CD-ROM presents material in support of the Symposium on Marine fisheries, ecosystems, and societies in West Africa: half a century of change.

Regional and national lists of marine fishes, incorporating the results of the "FishBase" module of the SIAP project, i.e., covering the 7 member countries of the N.W. African sub-region

Ecopath models for major marine ecosystems in the seven member countries of the sub-region, mostly covering two time periods with contrasting ecosystem structures. Models were constructed by SIAP project and SAUP team members during workshops in Dakar, Senegal and in Vancouver, B.C., Canada, and represent the key results of the Ecopath module of the SIAP project

The raw data and full documentation of the Guinean Trawling Survey (1963-1964), which established baseline abundances for the demersal resources along the West African coast, offered here as a contribution to the TrawlBase module of SIAP

An exhaustive documentation of the fisheries of the sub-region, presented in the form of bibliographies and PDF files of articles from various newsletters and journals.

The creation of this CD-ROM was funded by the SIAP project. It is freely available to all SIAP members and scientific partners. An updated version will be available in fall (2002) for distribution to a wider audience. Additionally, Power Point versions of selected presentations at the Symposium and any other material deemed useful will be included. Please contact the first author at the address below if you have suggestions on improving this CD-ROM.

MARINE ECOSYSTEMS OF THE Northwest African Subregion

Time-series of FAO catches allocated to EEZ of all West African countries from Morocco to South Africa, using an original procedure developed by Reg Watson and colleagues of the Sea Around Us Project, offered here as a contribution to the StatBase module of SIAP
