

3. ACKNOWLEDGEMENTS

L. Pang and D. Pauly wish to thank Drs. V. Christensen, M.L. Palomares, R. Sumaila and R. Watson for critically reading this part of the report and providing crucial feedback. A number of colleagues are also gratefully acknowledged, in China and elsewhere, who provided crucial insights and inputs, but preferred to remain anonymous. Ms. A. Atanacio and Mr. A. Beattie kindly helped with the preparation of the graphs.

R. Watson gratefully acknowledges the enormous efforts made to make a range of necessary data available, notably by his colleagues at the 'Sea Around Us Project', funded by the Pew Charitable Trusts at the Fisheries Centre, University of British Columbia, and by colleagues around the world. He specifically thanks Rainer Froese and the FishBase team for their excellent data and assistance. Liberal use was made of FAO databases and I thank the professional staff who generated them. The primary productivity data used here were supplied by Nicolas Hoepffner of the European Commission's Marine Environment Unit, Italy. The Kleypas database of coral reef distribution was made available by Lambert Meñez of the ReefBase Project. Maps of permanent ice coverage were provided by the U.S. National Snow and Ice Data Center. Veridian Information solutions Inc. produced the Global Maritime Boundaries Database CD, the source of national EEZs and the U.S. National Geophysics Data Center produced the Global Relief CD with depth data. This work resulted from a proposal by Daniel Pauly and the author takes this opportunity to thank him, as well as Villy Christensen at the Fisheries Centre, and Norm Hall at Murdoch University for their continuing enthusiastic support and intellectual gifts. Tireless hours were spent by Ahmed Gelchu on researching marine taxa distributions, and by Fred Valdez on supporting the development of our database. The accuracy of species distributions and subsequent work greatly benefited from the input and review of experts such as shark expert Ramon Bonfil. Finally, the author thankfully acknowledges editorial assistance from Daniel Pauly and Dirk Zeller.
